

Lysozyme Rehydration Procedure

1. Weigh out the quantity of lysozyme to be added.
2. Add this quantity of lysozyme to approximately 5 times its weight in tepid (warm) water.
 - 1 kg lysozyme to approximately 1.5 gal (or approximately 5.7 L water)
 - 1 lb lysozyme to approximately 0.75 gal (or approximately 2.8 L water)
3. Stir this mixture gently for about 1 minute. Avoid foaming!
4. Allow this mixture to “soak-up” for at least 45 minutes.
- 5. Repeat steps three and four until the solution has completely dissolved into a clear, colorless liquid.**
